Greek Multiplier Event on involving people with Down Syndrome in the implementation of Sustainable Development Goals, through Service Learning

The Multiplier Event in Greece was organized by the Institute for Entrepreneurship Development - IED, in the framework of the Erasmus+ SSinDS programme of the European Union and was held at the Institute's premises, at Joist Innovation Park in Larissa.

The Event was attended by 30 participants. During the implementation of it, personalized presentations were used, both the e-Learning Platform and the project dissemination channels (website, Facebook Page) were detailed presented, while all participants showed particular interest in the project and its results, and actively participated.

Another important contribution was the online participation and presentation of Dr. Spyridon Doukakis, who spoke about sustainability issues and the well-being of people with disabilities.

Additionally, the participants had the opportunity to identify the needs of Larissa, to seek solutions and to define a substantial action plan that they will implement within the next few months. The Event ended with discussion, sharing of certificates, and free time for networking.
